

FOURTH WORKSHOP

ON COMBINATORIAL AND ALGORITHMIC ASPECTS OF NETWORKING

August 14th, 2007
Dalhousie University, Halifax, Canada

General Information

The Internet, because of its size, decentralized nature, and loosely controlled architecture, provides a hotbed of challenges that are amenable to mathematical analysis and algorithmic techniques. This workshop brings together mathematicians, theoretical computer scientists and network specialists in a fast growing area that is an intriguing intersection of Computer Science, Graph Theory, Game Theory, and Networks.

CAAN'07 will be a one-day workshop, co-located with WADS'07 (August 15-17, 2007) in Halifax, NS, Canada

Invited Speaker

Peter Winkler, Dartmouth College, Hanover, NH

Program Committee

Dimitris Achlioptas (UC Santa Cruz), Anthony Bonato (Wilfrid Laurier University), Allan Borodin (University of Toronto), Colin Cooper (King's College), Erik Demaine (MIT), Thomas Erlebach (University of Leicester), Angele Hamel (Wilfrid Laurier University), Jan van den Heuvel (London School of Economics), Klaus Jansen (Universitat Kiel), Jeannette Janssen (Dalhousie University; PC Chair), Valerie King (University of Victoria), Danny Krizanc (Wesleyan University), Stefano Leonardi (Universita di Roma "La Sapienza"), Alejandro Lopez-Ortiz (University of Waterloo), Lata Narayanan (Concordia University), Richard Nowakowski (Dalhousie University), Pawel Pralat (Dalhousie University; Local Arrangements Chair), Sunil Shende (Rutgers-Camden), Eva Tardos (Cornell University).
